Fortifying Your Brand in the Web3 World.

Introduction to Brand Protection in Web3.

In the innovative realm of Web3, where digital transactions are irreversible and anonymity can shield bad actors, it is crucial to protect your brand's identity proactively. NameBlock, in partnership with Freename, introduces a tailored solution to secure your brand across an expanding universe of Web3 domains. This protection is not just about safeguarding; it's about ensuring your brand remains synonymous with trust and authenticity in the digital landscape.

What is BrandLock for Freename?

BrandLock for Freename is a set of security packages designed to prevent the unauthorized use of your brand's name across Freename's extensive network of Web3 Top-Level Domains (TLDs). By blocking the registration or minting of domain names that match your brand, BrandLock acts as a crucial shield against impersonation and misuse.

Why Choose BrandLock for Freename?

Cost-Effective

Web3 blocking is far less costly compared to the resources needed to actively register, manage and maintain each Web3 domain name.

Maintaining Brand Integrity

Ensure your brand's digital presence is consistent and uncontested as there are no standard right protection mechanisms in Web3.

Proactive Defense in the Web3 World

Ideal for brands that don't yet have a strategy in place for specific Web3 extensions.

How to Get Started:

Contact us today to fortify your brand's presence on Web3 and prevent unauthorized use of your identity. Our team is ready to help you configure the BrandLock protection that best suits your needs.
